

Training Day – 1

Today's training focused on understanding different computing models and becoming familiar with commonly used cloud, deployment, project management, and version-control platforms. The session provided a foundational understanding of how modern software systems are developed, deployed, and managed.

Work Undertaken:

- Studied Standalone Computing, where a single computer performs tasks independently without relying on other systems.
- Learned about Client Computing, in which a client device or application requests and receives services or resources from a server.
- Explored Distributed Computing, where multiple computers work together to perform tasks and share resources.
- Gained an introduction to Cloud Computing, where computing resources such as servers, storage, and applications are provided over the internet.

Tools & Platforms Explored:

- AWS, GCP, and IBM Cloud: Studied these as major cloud computing platforms that provide infrastructure and other cloud-based services.
- Vercel: Learned about its use for hosting and deploying web applications.
- Trello, Jira, and Asana: Explored these as project management tools used for organizing tasks, tracking progress, and managing development workflows.
- Bitbucket and GitLab: Learned about their role as code repository and DevOps platforms for source-code management, collaboration, and software development workflows.

Additional Learning:

The session helped establish a clearer understanding of how computing has evolved from standalone systems to distributed and cloud-based environments. It also introduced the tools commonly used by development teams to deploy applications, manage projects, and collaborate on source code.

Conclusion:

The day provided a strong conceptual foundation in modern computing models and development platforms. Understanding these concepts and tools will help in effectively working with cloud-based applications, collaborative development environments, and professional software development workflows during the upcoming training.
