

Training Day – 14

Today's training focused on further exploring **AWS cloud infrastructure and cloud adoption concepts**. The session included practical work with Amazon EC2, an introduction to the AWS Cloud Adoption Framework, and the beginning of AWS fundamentals through AWS Academy.

Work Undertaken:

- Created and configured an **Amazon EC2 instance** on AWS to gain further practical experience with cloud-based virtual servers.
- Learned the fundamentals of the **AWS Cloud Adoption Framework (CAF)** and understood its purpose in helping organizations plan, organize, and manage their transition to cloud computing.
- Studied how the AWS CAF provides guidance for organizations during **cloud adoption and migration**, helping them identify the necessary capabilities and strategies for successfully moving to the cloud.
- Started the **AWS Fundamentals** learning course through **AWS Academy** to strengthen foundational knowledge of AWS services, cloud concepts, and best practices.

Additional Learning:

The session connected practical AWS experience with the broader concepts involved in cloud adoption and migration. Starting AWS Academy also provided a structured learning path for developing a deeper understanding of AWS and its services.

Conclusion:

The day provided a combination of practical and theoretical cloud learning. Creating an EC2 instance strengthened my hands-on AWS skills, while studying the AWS Cloud Adoption Framework and beginning AWS Academy helped build a stronger foundation for understanding cloud migration and AWS technologies.
