

Training Day – 6

Today's training focused on understanding the fundamentals of **Cloud Computing**, its architecture, service models, and the role of cloud platforms in delivering modern computing solutions. The session also provided an introduction to AWS and service-oriented concepts.

Work Undertaken:

- Learned the fundamentals of **Cloud Computing**, including its key characteristics, benefits, and basic architecture.
- Gained an introduction to **Amazon Web Services (AWS)** and studied its advantages and role in providing cloud-based computing services.
- Understood the concepts of **services, web services, and Service-Oriented Architecture (SOA)** and how they enable different software components to communicate and work together.
- Explored different **cloud platforms** and understood their role in providing computing resources and services over the internet.
- Studied the major **cloud service models**:
 - **IaaS (Infrastructure as a Service)**: Provides virtual infrastructure and computing resources such as servers, storage, and networking.
 - **PaaS (Platform as a Service)**: Provides a platform and environment for developing, testing, and deploying applications.
 - **SaaS (Software as a Service)**: Delivers software applications to users over the internet.
 - **FaaS (Function as a Service)**: Provides serverless execution of individual functions without requiring direct management of servers.

Additional Learning:

The session improved my understanding of how cloud-based services are designed, delivered, and managed. Studying the different service models also helped clarify how organizations can choose the appropriate level of infrastructure and management depending on their application requirements.

Conclusion:

The day provided a strong foundation in cloud computing concepts and modern cloud service models. The introduction to AWS, SOA, and IaaS, PaaS, SaaS, and FaaS helped me understand how cloud platforms support application development, deployment, and infrastructure management.
